DETAILED ACTION

This office action follows a response filed on June 16, 2006. Claims 1-13 are pending.

DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Ewen *et al.* (U.S. 6,444,833).

Ewen *et al.* discloses the compounds $\text{Me}_2\text{Si}(\text{2,5-Me}_2\text{-3-Ph-cyclopentadienyl thiophene})_2\text{ZrCl}_2$ and $\text{Me}_2\text{Si}(\text{2,5-Me}_2\text{-3-(2'-MePh)cyclopentadienyl thiophene})_2\text{ZrCl}_2$ and (examples 1 and 2, crystal structures in Fig. 1 and 2). Catalysts contain metallocene and aluminoxane or an ionic activator (col. 19, lines 7-9). Inventive catalysts are used in a process of copolymerizing ethylene and higher alpha olefin; in particular, the catalyst can be used to make LLDPE (col. 21, lines 43-45). Use of organoaluminum compounds and inert support as further catalyst components for gas phase processes is discussed in columns 20 and 21.

3. Claim 13 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Ewen *et al.* does not teach or fairly suggest a process using a catalyst comprising a metallocene having the substitution pattern disclosed in the claim.
